EDUCATION

Bachelor of Technology in Computer Science Engineering

2022–2026

Lovely Professional University, Jalandhar

PROFESSIONAL SUMMARY

Backend and Cloud Engineer with 4+ years of coding experience and 8+ production-deployed full-stack projects. Specialized in Java Spring Boot microservice architecture, JWT security, Redis caching, and PostgreSQL — paired with React frontends that are fast, animated, and actually shipped. Experienced in real-time WebSocket systems, Docker containerization, Test containers integration testing, and zero-downtime deployments across Vercel, Render, and Railway. Currently pursuing B.Tech in Computer Science (Cloud Computing) at LPU, graduating 2026

KEY PROJECTS

SearchWars – Search Volume Battle Game | *React, Vite, Tailwind, Spring Boot, PostgreSQL*

2024

- Built a Higher-or-Lower style game comparing real search volumes between topics in a battle-format UI.
- Implemented JWT auth protecting leaderboard submission while keeping gameplay fully public.
- Processes 1,000+ search volume comparisons with live API data per session
- Active 100+ monthly users and 1000+ unique users
- [Github Link](#) | [Demo link](#)

GeoScale – Geography Quiz & PvP Platform | *React, Vite, Spring Boot, PostgreSQL, Leaflet*

2025– 2026

- Built a full-stack geography quiz platform with real-time PvP mode, JWT authentication, and global leaderboards.
- Implemented an interactive true-size world map using Leaflet and GeoJSON with Mercator distortion correction.
- Deployed backend on Render, frontend on Vercel, database on Neon, resolved production CORS and login issues.
- Serving 500+ quiz questions across 195 countries with real-time PvP matchmaking
- [Github Link](#) | [Demo link](#)

Just Rocket Science – Rocket Encyclopedia | *React, Spring Boot, PostgreSQL, Docker, Test containers*

2026

- Built a full-stack rocket encyclopedia serving structured data (payload, stages, launch dates) via clean REST APIs with a Java microservice architecture.
- Implemented a 3D GLB model viewer for 14 rocket models with an interactive fleet roster.
- Configured Docker + docker-compose and wrote Test containers integration tests for production-grade reliability.
- Test containers integration tests achieve 85%+ backend coverage across rocket data endpoints
- [Github Link](#) | [Demo Link](#)

BallKnowledge — *Live Football Analytics Dashboard* | *Vite, Java, Spring Boot, PostgreSQL*

2026

- Built a football analytics dashboard aggregating live match data, scores, and standings across 5 major European leagues (Premier League, La Liga, Bundesliga, Serie A, Ligue 1) via the football-data.org REST API.
- Engineered resilient API integration with status-code validation, automatic retry-with-backoff on rate-limit (429) responses, and structured error surfacing for failed requests.
- Implemented graceful empty-state UI for off-season leagues instead of silent blank screens.
- [Github Link](#) | [Demo Link](#)

Serenity – Mental Health & Wellness Platform | *HTML, CSS, JavaScript, LocalStorage*

2026

- Built a full-featured mental wellness platform combining mood tracking, guided breathing, journaling, and clinically-modeled PHQ-9/GAD-7 self-assessments with automated severity scoring.
- Designed "Sage," a rule-based conversational AI companion using intent matching across 12+ emotional categories for context-aware response selection.
- Built an end-to-end therapist booking flow with provider filtering, slot scheduling, and a simulated payment checkout.
- Implemented persistent client-side state for mood history, journal entries, and assessment results with streak tracking and animated visualizations.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, HTML5, CSS3, SQL

Backend: Spring Boot, Spring Security (JWT), JPA/Hibernate, REST APIs, MapStruct, Redis, WebSocket

Frontend: React, Vite, Tailwind CSS, Framer Motion, JavaScript

Cloud & DevOps: AWS, Azure, Docker, GitHub Actions, CI/CD, Vercel, Render, Railway

Databases: PostgreSQL, Redis, MongoDB

Testing & Tools: Testcontainers, JUnit, Git, GitHub, Postman, Swagger

ACHIEVEMENTS

- Shipped 8+ full-stack projects to production across Vercel, Render, and Railway.
- Earned 23 verified certificates across Cloud Computing, ML, Algorithms, and Web Development.
- Achieved 85%+ backend test coverage using Testcontainers integration tests on JRS.
- Resolved a two-layer UTF-8 encoding bug across Java backend and React frontend in BallKnowledge.
- Deployed microservice architecture with API gateway and JWT authentication across multiple projects.

ADDITIONAL INFORMATION

Availability: Open to full-time SDE / Backend / Cloud Engineering opportunities

Relocation: Flexible and open to relocation

Career Goal: Continuously learning, growing, earning new experiences and building impactful software that improves lives
